

IBM InfoSphere Information Server Update & Roadmap

Data Server Day
Stockholm, May 2017

Beate Porst – porst@us.ibm.com
Program Manager – Product Management
IBM InfoSphere Information Server

Disclaimer :

- IBM's statements regarding its plans, directions, and intent are subject to change or withdrawal without notice at IBM's sole discretion.
- Information regarding potential future products is intended to outline our general product direction and it should not be relied on in making a purchasing decision.
- The information mentioned regarding potential future products is not a commitment, promise, or legal obligation to deliver any material, code or functionality. Information about potential future products may not be incorporated into any contract.
- The development, release, and timing of any future features or functionality described for our products remains at our sole discretion.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon many factors, including considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve results similar to those stated here.

Our Portfolio: Power behind and across the portfolio

Data
Science
& Machine
Learning

*Embrace new
ways to
develop
insights and
streamline
operations*

Unified
Governance

*Enable better
insight and
compliance
across all data*

Hybrid Data
Management

*Unify the
approach to data
and content on
the path to cloud*

Data Analytics
& Visualization

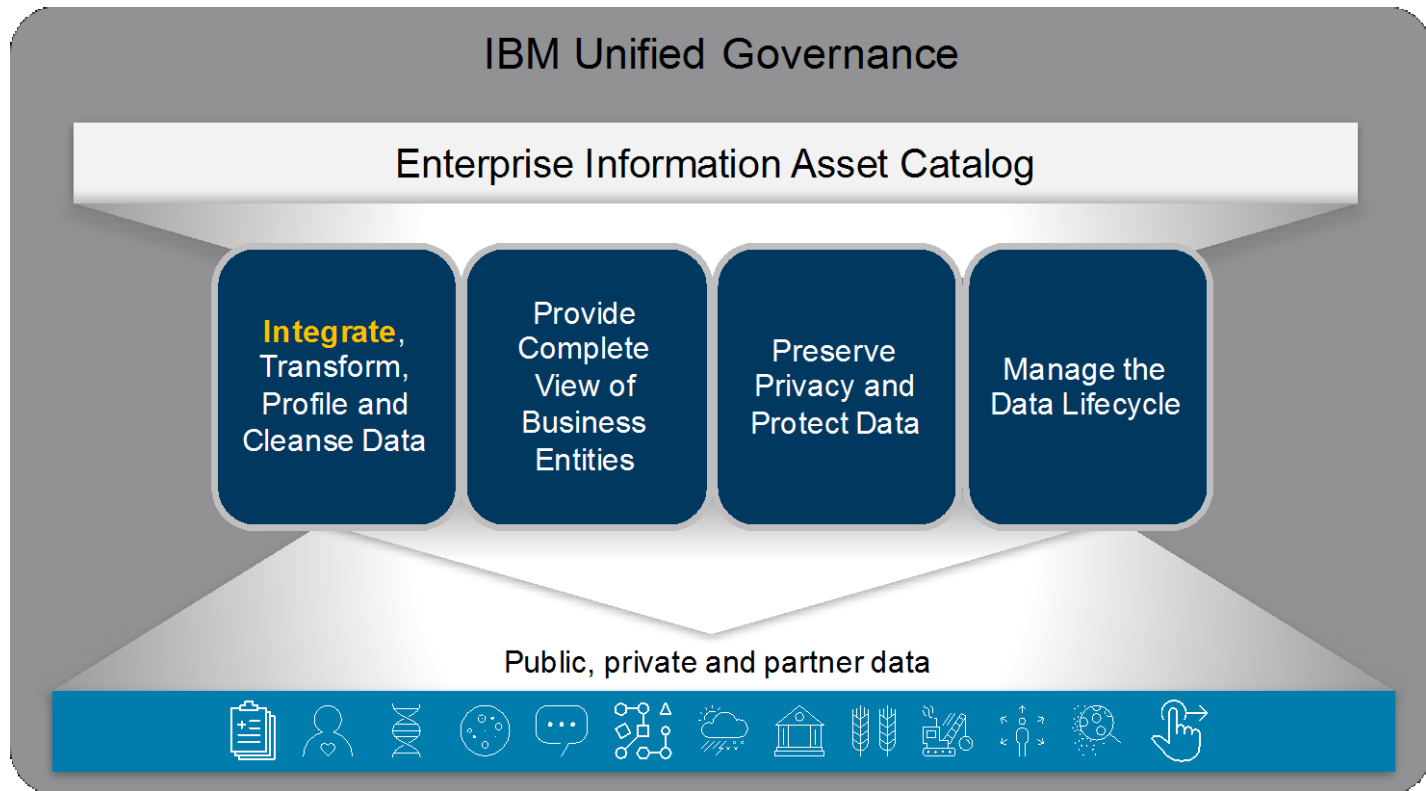

*Empower all to
make data-driven
decisions quickly
and easily*

Open Source: Hadoop, Spark & more
Commit to openness—for speed and innovation

Unified Governance

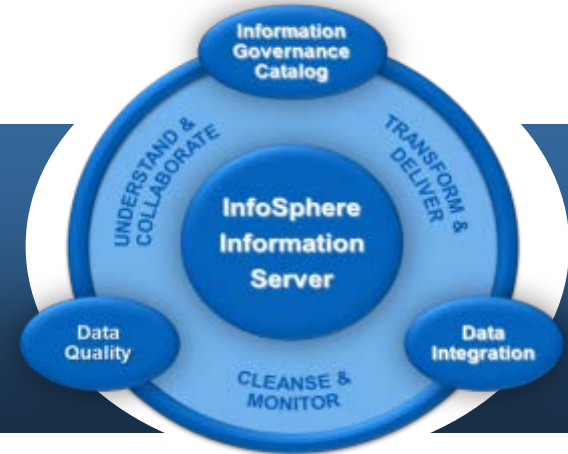

Enable better insight and compliance across all data

Unified Governance...

... powered by Information Server

Integrating and transforming data and content to deliver accurate, consistent, timely and complete information on a single platform unified by a common metadata layer

Information Governance

Understand & Collaborate

- Catalog technical metadata & align w/ business language
 - Mange (big) data lineage
- New compliance reporting

Data Quality

Cleanse & Monitor

- Analyze & validate w/ enhanced classification
- Cleanse & standardize
- Define, manage & monitor data rules + exceptions

Data Integration

Transform & Deliver

- Massive scalability
- Power for any complexity
- Deliver in batch and/or real-time with change capture

common connectivity • shared metadata • security • data privacy
common execution engine with flexible deployments → Hadoop • Grid • Cluster • Cloud

Information Integration is Core for many use cases – Traditional and New

Deliver Trusted
Information for Data
Warehousing and
Analytics

Integration &
Governance for Data
Lakes

Self-service data to
sandbox for ad-hoc
analytics

Consolidate
Applications

Secure enterprise
data and ensure
compliance

Build and manage a
single view

Make Enterprise
Applications more
efficient

IBM InfoSphere Information Server

Continuous Feature Release & Stack Expansion

GA
Information
Server v11.5

GA
Information
Server v11.5.0.1

New User
Experience for the
Business Analyst

NEW GA
Information
Server v11.5.0.2

New IA Thin Client
Launch
User Experience for
the **Data Analyst**

New
IBM Information
Server on Cloud
offerings

New SAP ERP &
BW Packs

Other Gov/DQ/DI feature patches

IGC – Custom Attribute of Type Relationship

- Define and manage relationships between any two Assets within Information Governance Catalog, such as Business Owners or Asset Dependency.
- Support the ability to extend the Catalog and document impact or referential relationships.

Create Custom Attribute

Name:

Applies to Assets:

- ☐ Data Class
- ☐ Host
- ☐ Database
- ☐ Database Schema

Description:

Custom Attribute Type:

- ☐ Text — A field with any string as a value for the attribute
- ☒ Related Asset — A relationship to one or more Assets of the Catalog

Options:

- ☐ Multiple Values — The custom attribute can have more than one value
- ☐ Display in Child Assets — The value of the custom attribute is displayed in all child assets of the selected asset type

Related Assets:

Inverse Name:

Select | In | Remove from List | Edit

Term Details

Product

Identifies that the Product, with its associated Conditions and Procedures, as the primary form of the Product.

Authoritative Sources (3)

[Product.txt](#) / [WIN2008](#)

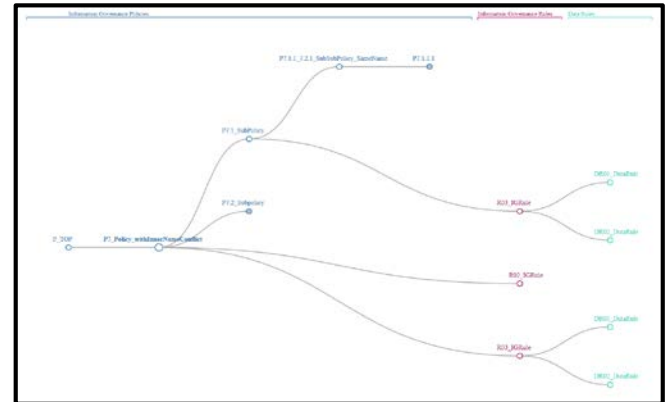

[Product Unit](#) / [EWS Warehouse Model](#)

[WHS_PRODUCT](#) / [Data Server](#) » [DW](#) » [PRODUCT](#)

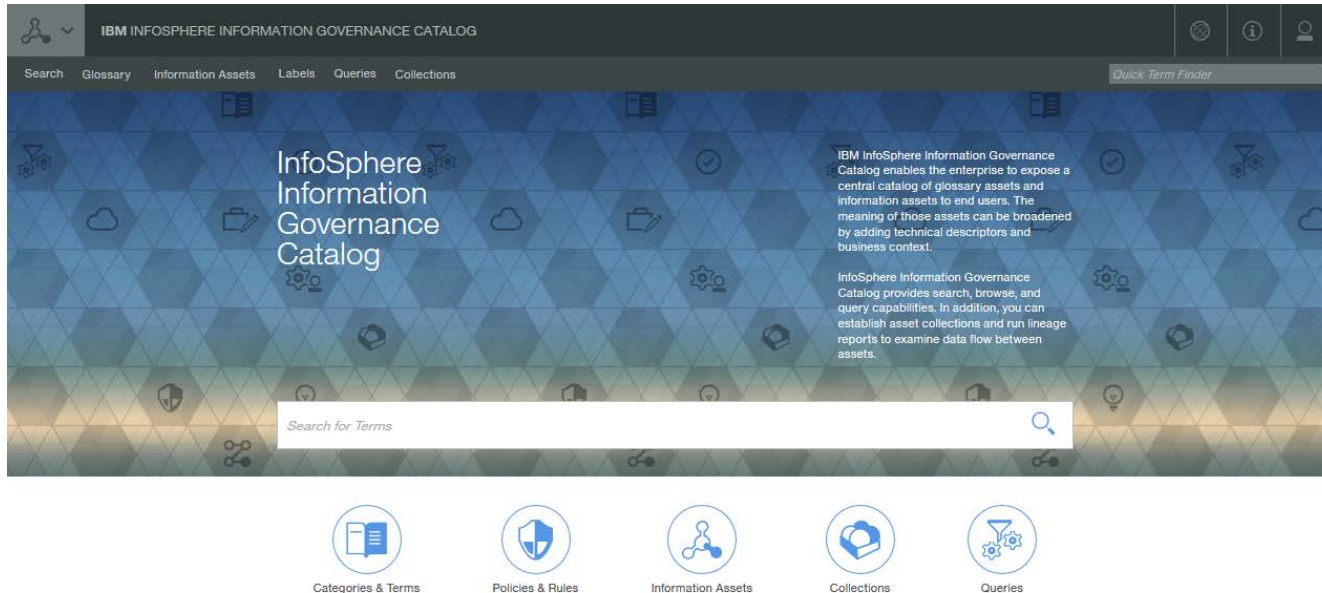

Explore and discover the Neighborhood Graph of any Asset, discover its dependencies and usages.

Explore and discover relationships of a Glossary Term

- What are the components of a Term.
- What Types is the Term associated with.

IGC – Business User focused User Experience

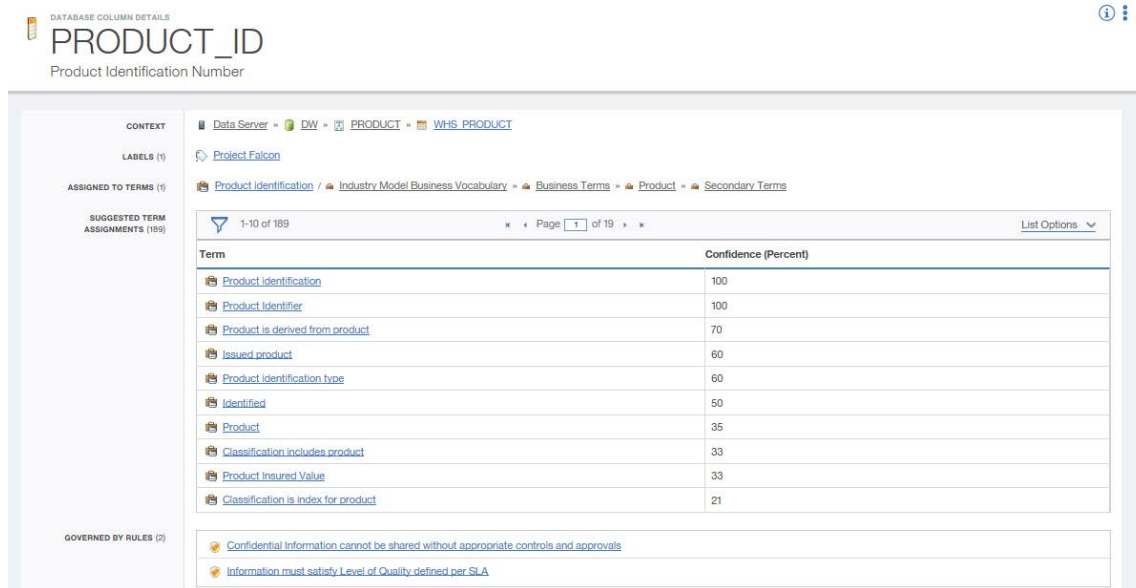

Simplifies and re-define the user experience, while continuing to deliver the ability to define, capture and report upon Data Governance initiative and requirements.

IGC – Suggested Term Assignment

Greater benefit when searching and exploring information within IGC, assets should be aligned with a Glossary Term that can clearly express their definition and requirement.

To aid, we introduce a capability to scan a Database or set of Data Files and suggest the Term assignment.

The screenshot displays the 'PRODUCT_ID' database column details page. The page title is 'PRODUCT_ID' with the subtitle 'Product Identification Number'. The breadcrumb trail shows the navigation path: Data Server > DW > PRODUCT > WHS_PRODUCT. The left sidebar contains navigation links for 'CONTEXT', 'LABELS (1)', 'ASSIGNED TO TERMS (1)', 'SUGGESTED TERM ASSIGNMENTS (189)', and 'GOVERNED BY RULES (2)'. The main content area shows a list of suggested terms with their confidence percentages. The table has two columns: 'Term' and 'Confidence (Percent)'. The terms listed are: 'Product identification' (100%), 'Product identifier' (100%), 'Product is derived from product' (70%), 'Issued product' (60%), 'Product identification type' (60%), 'Identified' (50%), 'Product' (35%), 'Classification includes product' (33%), 'Product Insured Value' (33%), and 'Classification is index for product' (21%). At the bottom, there are two rules: 'Confidential Information cannot be shared without appropriate controls and approvals' and 'Information must satisfy Level of Quality defined per SLA'.

DATABASE COLUMN DETAILS

PRODUCT_ID

Product Identification Number

CONTEXT: Data Server > DW > PRODUCT > WHS_PRODUCT

LABELS (1): Project Falcon

ASSIGNED TO TERMS (1): Product Identification / Industry Model Business Vocabulary > Business Terms > Product > Secondary Terms

SUGGESTED TERM ASSIGNMENTS (189): 1-10 of 189

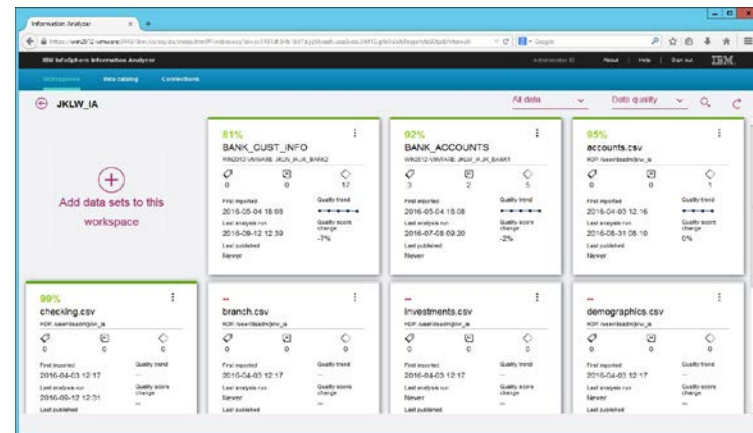

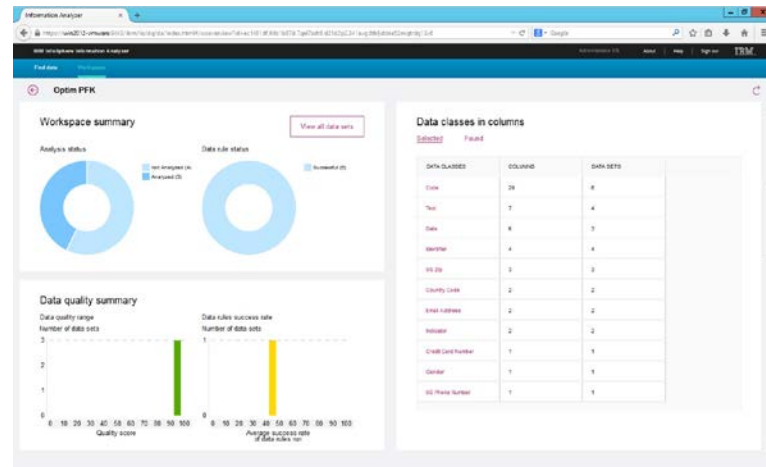

Term	Confidence (Percent)
Product identification	100
Product identifier	100
Product is derived from product	70
Issued product	60
Product identification type	60
Identified	50
Product	35
Classification includes product	33
Product Insured Value	33
Classification is index for product	21

GOVERNED BY RULES (2):

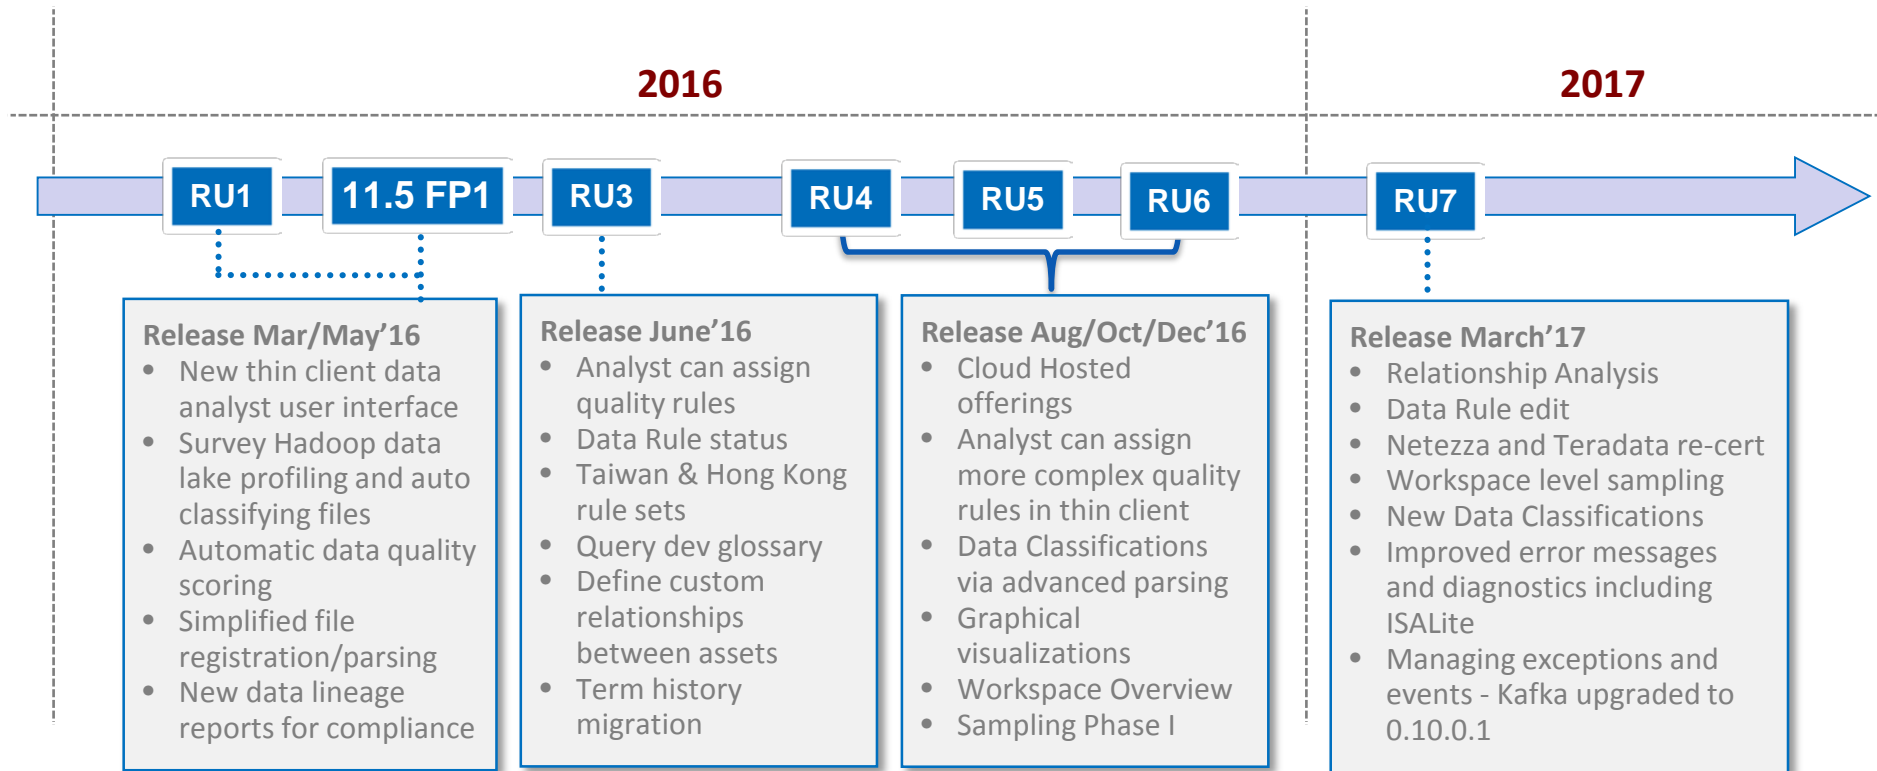

- Confidential Information cannot be shared without appropriate controls and approvals
- Information must satisfy Level of Quality defined per SLA

Information Analyzer – Thin Client

- Lightweight, browser-based UI requires no client-side patches
- Streamlined interface is well suited for Business users and Analysts
- Companion to the Information Analyzer Workbench
 - Completing migration in 2017
- Data Quality scores calculated for all columns
- Can browse and analyze delimited files on both Hadoop HDFS and local (engine) file systems
- Data analysts can run, view and edit analysis results for data sets and view data quality scores for files, tables and columns

IA – Recent Product Updates

IA – Relationship Analysis & Data Rule Assignment

IBM Information Analyst

Relationships

Choose a data rule or quality rule

Select the columns you want to bind

Choose your rule definition

Drop your columns on a variable to bind

13

The image displays the IBM Information Analyst interface, which is used for relationship analysis and data rule assignment. The interface is divided into several sections:

- Governance:** Shows the user's role (AI), creation date, and last modified date.
- Rules:** Displays the status of data rules (0 data rules) and a message indicating no rules are associated with the workspace.
- Classifications:** A diagram showing various data types (Code, Boolean, Text, Date, Identifier) and their relationships.
- Activity:** A donut chart showing the distribution of data types (Candidate, Selected, Analyzed).
- Relationships:** A donut chart showing the distribution of data types (Candidate, Selected).
- Data Quality:** A bar chart showing the number of data sets (0 to 100) and a quality score (0 to 100).
- Relationships (Detailed):** A table showing the relationships between data sets, including columns like ACCOUNT_ID, BALANCE, and STATUS.
- Relationships (Detailed):** A table showing the relationships between data sets, including columns like ACCOUNT_ID, BALANCE, and STATUS.
- Relationships (Detailed):** A table showing the relationships between data sets, including columns like ACCOUNT_ID, BALANCE, and STATUS.

The interface also includes a sidebar with a list of data sets and a bottom section for defining relationships and rules. The bottom section contains a table with columns for relationship ID, name, and status, and a table for defining rules with columns for rule ID, name, and status.

Connectivity – New, Expanded or Enhanced

Ambari Integration

- Configure, deploy and manage Information Server nodes from Ambari Management Console
- Start/Stop PX Yarn Client from Ambari
- Run IS Verification Service

Ambari Management Console - HDFS Service Configuration

Summary

- Service Status:** Running
- Nodes:** 12
- Configuration:** Default
- Metrics:**
 - NameNode GC time: No Data Available
 - NameNode Heap: No Data Available
 - NameNode Heap Memory Used: No Data Available

	Q1	Q2	Q3	Q4
Data Quality	<ul style="list-style-type: none"> • New thin client Data Analyst user interface • Survey Hadoop data lake profiling and auto classifying files • Automatic data quality scoring • Simplified file registration / parsing 	<ul style="list-style-type: none"> • Analyst can assign quality rules • Data Rule status • Taiwan & Hong Kong rule sets 	<ul style="list-style-type: none"> • Data Quality Cloud Hosted offerings • Analyst can assign more complex quality rules in thin client • Data Classifications via advanced parsing • Historical lineage & DQ reporting 	<ul style="list-style-type: none"> • New Data Quality workspace and data rule experience → (aks IA think client) • New data sampling algorithm
Governance	<ul style="list-style-type: none"> • New Compliance Reporting • Annotate Asset Definitions • Data Quality Scoring & Metric support 	<ul style="list-style-type: none"> • Query Development Glossary Assets • Custom Attributes of type Relationship • Term history migration 	<ul style="list-style-type: none"> • Governance Cloud Hosted offerings • Graphical relationship Visualization • Additional Visualization Reports for Terms and Entities 	<ul style="list-style-type: none"> • Governance made easy: New Business User focused interface • Business Lineage improvements • Historical Lineage Reporting support

IIG Strategy / Roadmap 2017 & Beyond

IBM Information Integration & Governance

... the road ahead – *Primary Objectives for 2017 & beyond*

Modernization

- Re-invent user experiences
- Strengthen support for **Data Lakes**
- **Modernize** the foundation
- Implicit **Governance & Quality** monitoring/enforcement

Hybrid

- Build a best in class *true Hybrid Integration Platform*
- Support **Data Gravity** and deployment flexibility
 - System or user controlled runtime optimization
 - Hybrid elasticity

Unified Governance

- Support **Governance 2.0**
- Governance for **Insights** and **Compliance** for anyone and anything

Simplify, Accelerate & Automate Integration

Modernizing
Information
Server
Foundation
with build in
automation

Self-service
cognitive
Integration &
Quality Design

Redesigning
DataStage User
Experiences

Best in class
support for
Data Lakes

- Connectivity
- Data Security
- Ease of
Management &
Deployment

Accelerate and
simplify the
time to value
with
**Download &
Go**

Self-service
integration &
preparation
with implicit
quality &
governance
control & **Shop**
for Data

Improving your Time to Value, Management and Productivity of your Data Lakes

Continues
Connectivity
expansions and
enhancement

Tight integrate
into Hadoop
Cluster
Management

Peace of Mind:
Enhanced Data
Masking
functions

Simplifying
Maintenance and
HA for Hadoop
and stand-alone
Grid deployments

Continues
certification of
supported
Hadoop
distribution

Business Agility demands Expansion of Integration User Community

Data Preparation & Curation

WHO:

- Business users / Data owners non-technical users

WHAT:

- Visual data shaping/curation → WYSIWG
- Closely guided and controlled (shop for data paradigm)
- Manipulation of 1-2 data sets at a time

Self-Service Integration

WHO:

- Shadow IT, LOB users, Data Scientist, semi-technical

WHAT:

- Combined visual & flow based design
- Template / pattern approach
- Zero configuration
- Implicit validation
- Collaboration

Enterprise-class Integration

WHO:

- Integration Specialist, Integration Developer, highly technical

WHAT:

- Comprehensive library of integration, transformation & quality operations
- Support for comprehensive integration flows and projects
- Expandability for custom operations
- Full control for configuration & parameterization
- Top-down or bottom-up design approach
- Support for team development process

Cognitive Integration Design

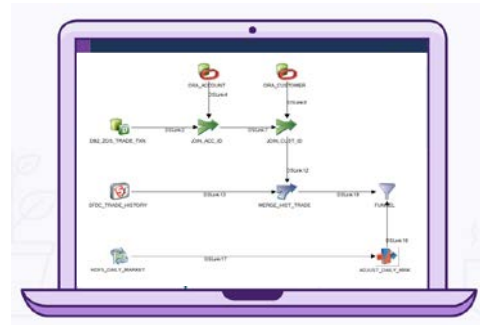

Next Gen DataStage Designer

- *What:*

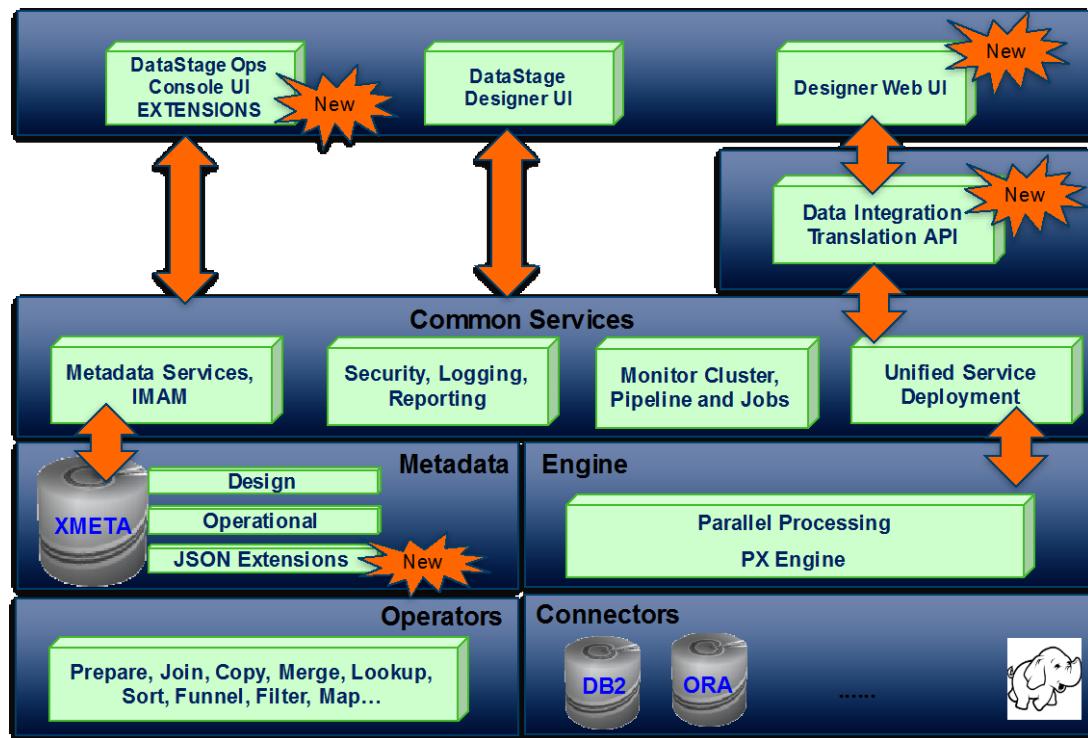

- *ZERO* Install → Browser based design
- *ZERO* migration → view existing jobs/projects in new designer
- Ability to use new & old Designer side by side
- New simplified *Design experience* without compromising capabilities

- *Who:*

- **Phase 1:** New Integration experience for *Integration Specialist / Integration Developers*
- **Phase 2/3:** *Self service* integration and preparation for Business and LOB users

Enhanced Architecture to support new UI

What do we mean by Hybrid Integration?

Choice of
Runtimes
based on your
data delivery
requirements

Distributing
workloads
across loosely
coupled
runtimes

Combined SaaS
and on-premise
self service
prep /
integration

Optimizing
workloads
based on Data
Locality

On-demand /
elastic expansion

Unified Governance

A New Era of Governance

Governance 1.0

- Data within the firewall
- Distinct capabilities for structured & unstructured data
- Compliance use cases: e-Discovery, Records, Archiving, GDPR, BCBS 239, Basel II etc.
- IT led

Governance 2.0

- Data, API's, & Analytics in or outside the firewall (Hybrid platform)
- Common capabilities: Policy Administration, Metadata, Consent Management, & Stewardship
- Compliance & analytics use cases: Information Repositories (e.g. Data Lakes), Self-service analytics, Regulations, & Data Science, GDPR, BCBS 239, Basel II etc.
- IT & Business led

Use Cases Driving a Unified Governance Strategy

GOVERNANCE FOR COMPLIANCE

Discover, classify and manage information in ways that meet the obligations enforced by both regulatory and corporate mandates

Regulations (e.g. GDPR)

Privacy & Protection

eDiscovery

Records & Retention

Archiving

Audit Readiness

GOVERNANCE FOR INSIGHTS

Provide safe access to trusted, high quality, fit-for-purpose data while facilitating effective collaboration among team members

Self-Service Access to Data & Analytics

Governed Enterprise Information
Repositories (such as Data Lakes)

GOVERNANCE FOR COMPLIANCE

IGC, IBM Atlas GRPSM, StoredIQ, MDM
Optim, Information Analyzer

Regulations
(e.g. GDPR)

Privacy &
Protection

Optim, Information Analyzer, IGC,
StoredIQ, Content Collector

eDiscovery

eDiscovery
Manager/Analyzer, StoredIQ

Records &
Retention

IBM Atlas GRPSM, IBM Enterprise Records

Unified
Governance

Self-service
Access to Data
& Analytics

GOVERNANCE FOR INSIGHTS

Information Server, MDM,
StoredIQ, Optim

Governed
Information
Repositories
(e.g Data Lake)

Information Server, MDM,
StoredIQ, Optim

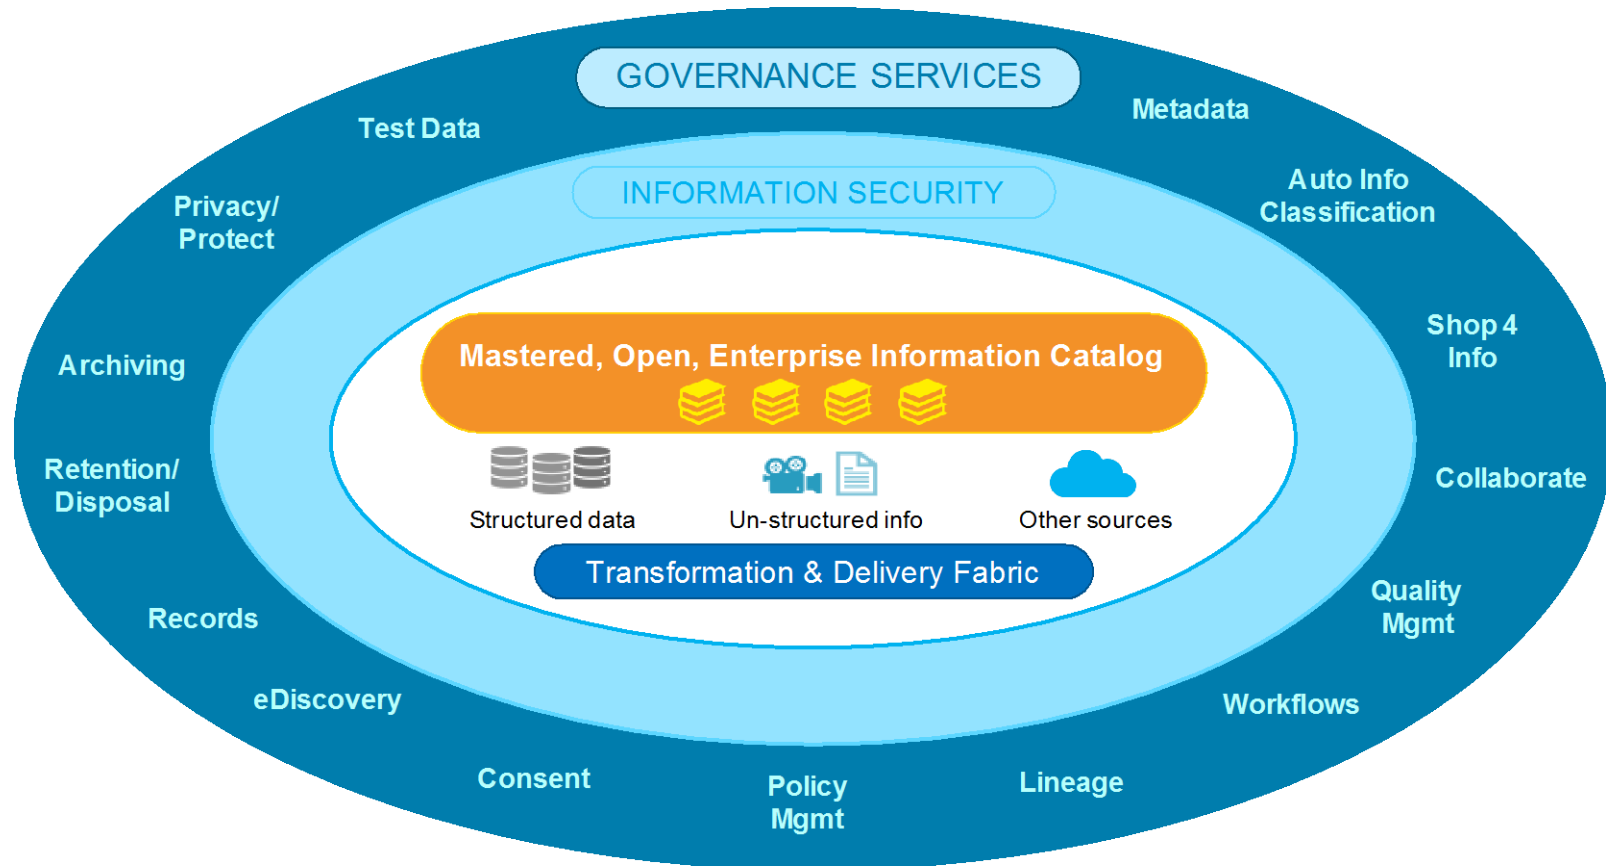

Audit
Readiness

IGC, IBM Atlas GRPSM, StoredIQ,
Optim,
Information Analyzer, MDM

Archiving

Optim, IBM Atlas GRPSM, IGC,
Content Collector, Content
Classification, FileNet

Unified Catalog – The Core of the Unified Governance

User Experience

Support varied users (Business Analyst, Developer, Author, Architect) within IGC, where each user has different requirements - what information do they wish to view, the scope of that information, the actions available - and each user would like to include personalized shortcuts and bookmarks, and included dashboards or reports.

			
	Information Architect	Business Analyst	Governance Administrator

Activity

2/3/17, 5:35 PM **Pre-qualify** added to Terms

- Usage
 - How data is used

Business & Historical Lineage

- *Support the requirement of the business to save and compare historical Lineage requirements to support compliance and regulatory requirement.*
 - Support ability to save and retrieve Lineage Reports, with additional descriptors
 - Support ability to compare versions of saved Lineage Reports, or compare to the current Lineage View
- *Support the requirement of the business to view Lineage according to the language and level of understanding of the business – according to domain or project.*
 - Support ability to create and manage Lineage Projects or Domains
 - Support ability to render, filter and customize Lineage according to Lineage Projects or Domain
 - Support ability to expand Lineage and view detailed view of data flow

Near Term Mile Stones
