HORTONWORKS SUMMIT

den 6 december på Convendum – Vasagatan 16

Agenda
dagens sessioner

12.45 dörrarna öppnas

13.00 – 13.10 Välkommen
Bård Hakkestad, Middlecon AB

13.10 – 14.30 Keynote
Hortonworks
Venkatesh Sellappa
Partner Solutions Engineering
https://www.linkedin.com/in/ivenkys/

Venkatesh is a senior hands-on technologist interested in helping companies reach business goals effectively using Big Data and associated technologies. He has wide ranging experience with large organizations in defining business strategy, solution selling, business development activities, partner engagement and mentoring.

He is also deeply involved in various Open Source projects as a contributor. He has designed and developed architecture and solutions using a variety of approaches in line with performance and resource constraints.

Venkatesh kommer att dela med sig av sina tekniska kunskaper och i slutet av föreläsningen kommer det finnas möjlighet att ställa frågor.

14.30 – 15.00 Paus

**15.00 – 16.00 Kundcase -
Hortonworks och GDPR
Svenska Spel
Magnus Runesson**
Data Engineer
https://se.linkedin.com/in/mrunesson

SVENSKA SPEL

Magnus Runesson is Senior Data Engineer at Svenska Spel responsible for architect, develop and operate their Hadoop environment. He has a Master of Science and Engineering from Linköping University, Sweden. Magnus has long experience to develop and operate distributed systems with high requirements on availability, performance and integrity from organization such as Spotify and the Swedish weather service. Magnus is the lead developer of open source tool cobra-policytool and was the driving force to open sourced it.

"The importance data access governance is continuously growing due to new regulations, such as GDPR, and industry policies. In this talk we will share learnings at Svenska Spel from implementing and supporting this growing demand. Our journey started less than a year ago implementing Atlas and Ranger in our Hortonworks Data Platform solution. From start we wanted to implement a process and solution that had:

- *minimal impact on ETL-developers and analysts*
- *privacy and security by design*
- *low maintenance burden using automatisation*

To be able to manage our policies and metadata we developed and open sourced cobra-policytool. Cobra-policytool integrates to our deployment pipeline and simplifies the way we express our policies. Thanks to the tool we can use Git as our truth of source for our policies and metadata information, along with the source code. It is close to seamless for our ETL-developers and with trust deploy the right policies.

Throughout the course of our journey we learned the importance having company policies and technology walk in tandem. Single source of truth, open platforms and automatisation are key to success. Data governance and metadata management are complex areas requiring high attention and are nothing you can duct tape in the end or solve buying a new powertool. With the right approach it can be rewarding and make new requirements easy to implement and audit."

16.00 – 16.15 Paus

**16.15 – 17.00 Wrap up
Bård Hakkestad
Middlecon AB**

17.00 – 18.30 Mingel

Kontakt: Kaleida Willen, Middlecon AB
